Table 3.1.2 OCCUPANCY CATEGORY OF BUILDINGS AND OTHER STRUCTURES

Category	Occupancy	Nature of Occupancy
I	Temporary	Buildings and other structures that represent a low hazard to human life in the event of failure, including but not limited to: • Agricultural facilities • Certain temporary facilities • Minor storage facilities
IIA	Low	Buildings and other structures except those listed in Occupancy Categories I. IIB. III and IV
IIB	Medium	Buildings and other structures which needs additional seismic safety requirements. including but not limited to: • Number of story above 8. • An occupant load from 151to 5000 except those listed in Category III. • Any building defined by the authority for additional seismic safety requirements.
III	High	 Buildings and other structures, the failure of which could pose a substantial risk to human life, including but not limited to: Covered structures whose primary occupancy is public assembly with an occupant load greater than 300. Buildings and other structures with elementary school, secondary school or day care facilities with an occupant load greater than 250. Buildings and other structures with an occupant load greater than 500 for colleges or adult education facilities. Healthcare facilities with an occupant load of 50 or more resident patients, but not having surgery or emergency treatment facilities. Jails and detention facilities. Any other occupancy with an occupant load greater than 5,000. Power-generating stations, water treatment for potable water, waste water treatment facilities and other public utility facilities not included in Occupancy Category IV. Buildings and other structures not included in Occupancy Category IV containing sufficient quantities of toxic or explosive substances to be dangerous to the public if released.
IV	Essential	Buildings and other structures designated as essential facilities, including but not limited to: • Hospitals and other health care facilities having surgery or emergency treatment facilities. • Fire, rescue and police stations and emergency vehicle garages. • Designated earthquake, hurricane or other emergency shelters. • Designated emergency preparedness, communication, and operation centers and other facilities required for emergency response. • Power generating stations and other public utility facilities required as emergency backup facilities for Occupancy Category IV structures. • Structures containing highly toxic materials. • Aviation control towers, air traffic control centers and emergency aircraft hangars. • Buildings and other structures having critical national defense functions. • Water treatment facilities required to maintain water pressure for the suppression.

D	Stiff soil profile	$600 \le \bar{v}_s \le 1,200$	$15 \le \overline{N} \le 50$	$1,000 \le \bar{s}_u \le 2,000$						
E	Soft soil profile	\bar{v}_{s} < 600	<i>N</i> < 15	<i>s̄</i> _u < 1,000						
E		 Any profile with more than 10 feet of soil having the following characteristics: Plasticity index PI > 20, Moisture content w ≥ 40%, and Undrained shear strength s̄_U < 500 psf 								
F	Any profile containing soils having one or more of the following characteristics: • Soils vulnerable to potential failure or collapse under seismic loading such as liquefiable soils, quick and highly sensitive clays, collapsible weakly cemented soils. • Peats and/or highly organic clays (H > 10 feet of peat and/or highly organic clay where H = thickness of soil) • Very high plasticity clays (H > 25 feet with plasticity index PI > 75). • Very thick soft/medium stiff clays (H > 120 feet) For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m², 1 pound per square foot = 0.0479 kPa.									

Table 3.4.7 SEISMIC DESIGN CATEGORY BASED ON SHORT PERIOD AND 1-SECOND PERIOD RESPONSE ACCELERATION PARAMETER

N/A = Not applicable.

$S_{ m DS}$	S_{D1}	Level of Seismicity	I	IIA	IIB	III	IV
